Expense Example

This example is intended to help you compare the cost of investing in the Global Growth Fund with the cost of investing in other mutual funds.

The example assumes that you invest \$10,000 in the Global Growth Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year, and that the Global Growth Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 Year	3 Years	5 Years	10 Years
Class A Shares	\$740	\$1,086	\$1,455	\$2,488
Class C Shares	\$350	\$ 770	\$1,316	\$2,806
Class I Shares	\$102	\$ 419	\$ 758	\$1,717

You would pay the following expenses if you did not redeem your shares of the Global Growth Fund:

	1 Year	3 Years	5 Years	10 Years
Class A Shares	\$740	\$1,086	\$1,455	\$2,488
Class C Shares	\$250	\$ 770	\$1,316	\$2,806
Class I Shares	\$102	\$ 419	\$ 758	\$1,717

Portfolio Turnover

The Global Growth Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when the Global Growth Fund’s shares are held in a taxable account. These costs, which are not reflected in the annual fund operating expenses or in the example, affect the Global Growth Fund’s performance. During the most recent fiscal year, the Global Growth Fund’s portfolio turnover rate was 29% of the average value of its portfolio.

Principal Investment Strategies

Under normal market conditions, the Global Growth Fund will invest at least 65% of its total assets in common stocks of companies which the portfolio manager believes are likely to have rapid growth in revenues and earnings and potential for above average capital appreciation or are undervalued. The Global Growth Fund invests primarily in common stocks of foreign and domestic small-capitalization, mid-capitalization, and large-capitalization issuers. As a “global” fund, the Global Growth Fund invests in securities of issuers, or related investments thereof, located in at least three countries, and at least 40% of the Fund’s total net assets is invested in securities of non-U.S. issuers or related investments thereof.

To achieve the Global Growth Fund’s primary objective of capital appreciation, the Adviser employs a disciplined investment program focusing on the globalization and interactivity of the world’s market place. The Global Growth Fund invests in companies at the forefront of accelerated growth.

The Global Growth Fund invests primarily in common stocks of foreign and domestic mid-capitalization and large-capitalization issuers. In addition to growth rates, stock valuation levels are important in the stock selection process as the Global Growth Fund seeks stocks that are attractively priced relative to their projected growth rates. The Global Growth Fund seeks to build a portfolio diversified by geographic region, industry sectors and individual issues within industry sectors. The Global Growth Fund invests primarily in developed markets but may invest in emerging markets as well. The Global Growth Fund invests in companies with a wide range in market capitalizations, from small to large.

Principal Risks

You May Want to Invest in the Global Growth Fund if:

- you are a long term investor
- you seek growth of capital
- you seek to diversify your investments outside the U.S.

The Global Growth Fund's share price will fluctuate with changes in the market value of the Global Growth Fund's portfolio securities. Stocks are subject to market, economic, and business risks that may cause their prices to fluctuate. Your investment in the Global Growth Fund is not guaranteed; you may lose money by investing in the Global Growth Fund. When you sell Global Growth Fund shares, they may be worth less than what you paid for them.

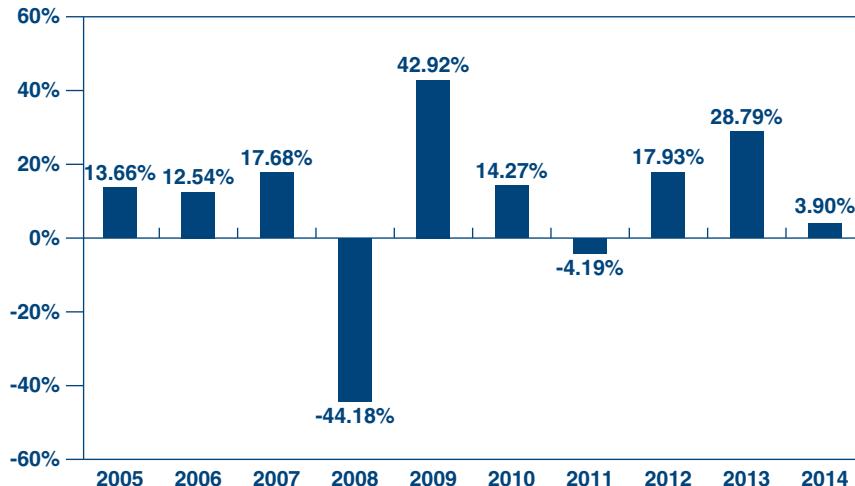

Investing in the Global Growth Fund involves the following risks:

- **Equity Risk.** Equity risk is the risk that the prices of the securities held by the Global Growth Fund will change due to general market and economic conditions, perceptions regarding the industries in which the companies issuing the securities participate and the issuer company's particular circumstances.
- **Foreign Securities Risk.** Investments in foreign securities involve risks relating to political, social, and economic developments abroad, as well as risks resulting from the differences between the regulations to which U.S. and foreign issuers and markets are subject. These risks include expropriation, differing accounting and disclosure standards, currency exchange risks, settlement difficulties, market illiquidity, difficulties enforcing legal rights, and greater transaction costs. These risks are more pronounced in the securities of companies located in emerging markets.
- **Management Risk.** If the portfolio managers are incorrect in their assessment of the growth prospects of the securities the Global Growth Fund holds, then the value of the Global Growth Fund's shares may decline.
- **Non-Diversification Risk.** As a non-diversified mutual fund, more of the Global Growth Fund's assets may be focused in the common stocks of a small number of issuers, which may make the value of the Global Growth Fund's shares more sensitive to changes in the market value of a single issuer or industry than shares of a diversified mutual fund.
- **Smaller Capitalization Risk.** Risk is greater for the securities of smaller capitalization companies (including small unseasoned companies that have been in operation for less than three years) because such companies generally are more vulnerable than larger companies to adverse business or economic developments and they may have more limited resources.

Performance

The bar chart and table that follow provide an indication of the risks of investing in the Global Growth Fund by showing changes in the Global Growth Fund's performance from year to year and by showing how the Global Growth Fund's average annual returns for one year, five years, and ten years compared with those of broad based securities market indices. As with all mutual funds, the Global Growth Fund's past performance (before and after taxes) does not predict how the Global Growth Fund will perform in the future.
